

Shawn Watkins

shawnwatkins120@gmail.com | (757) 677-5664

Professional Summary

Computer Science student with hands-on experience in software development, IT infrastructure, and networking. Skilled in building full-stack applications, designing intelligent systems, and writing clean maintainable code, with the ability to collaborate in teams and deliver real-world technical solutions.

Education

Old Dominion University — B.S. in Computer Science, GPA: 3.2 Aug. 2024 – Aug. 2026 (Expected)
Norfolk, VA

Tidewater Community College — A.S. in Computer Science, GPA: 3.2 Aug. 2022 – May 2024
Virginia Beach, VA

Experience

Software Engineer Intern May 2026 – Present
MI Technical Solutions | Chesapeake, VA

- Leading software development for an R&D team; Building an underwater hull inspection rover designed to detect safety and structural issues along naval ship hulls.
- Collaborating with a mechanical engineer, electrical engineer, and lead supervisor to design, build, and iterate on the system through August.
- Contributing to company-wide projects and technical initiatives across the organization.

IT Intern Jan. 2026 – Apr. 2026
City of Chesapeake | Chesapeake, VA

- Configured and deployed network infrastructure, managing hardware installation and maintenance across city facilities.
- Conducted site surveys to evaluate network coverage, identify infrastructure gaps, and document findings for technical review.
- Assisted in developing a Governance, Risk, and Compliance application to track and manage security artifacts across city network infrastructure.

Technical Skills

Programming & Development: Java, Python, C#/.NET 8, HTML/CSS

Software Engineering & Tools: Git/GitHub, GitLab, Agile/Scrum, CI/CD (GitHub Actions), UML

AI & Machine Learning: Hugging Face, Azure AI Foundry, GPT-4o, Prompt Engineering

Networking & Infrastructure: TCP/IP, DNS, HTTP/HTTPS, Cisco Routers, Fiber Optics, SFPs, Server Rack Management, Site Surveys

Operating Systems & Systems Programming: Linux/Unix Command Line, Windows

Projects

AI-Powered DevOps Automation — Microsoft AI Dev Days 2026 Azure AI Foundry, C#/.NET 8, GPT-4o, SignalR

- Worked alongside a project manager and developer to build an AI-powered DevOps automation system.
- Designed the end-to-end system architecture for a six-agent sequential pipeline where each agent calls GPT-4o with a specialized system prompt and outputs structured JSON.
- Implemented a human-in-the-loop approval gate, SARIF-compliant static analysis findings, and a real-time SignalR dashboard integration.

Misinformation Detection Web Application Node.js, Express, React, Hugging Face, MySQL

- Partnered with a team to build a full-stack web application combating online misinformation using AI-powered credibility analysis.
- Integrated a Hugging Face LLM to evaluate news articles in real time across domain reputation, political bias, source citations, and content quality, feeding structured JSON into a scoring algorithm that produces a 0–100 credibility score.
- Built with Node.js, Express, and React; incorporated web scraping, article extraction, and a MySQL-backed history system with JWT authentication.
