

Shawn Watkins

shawnwatkins120@gmail.com | (757) 677-5664 | Norfolk, VA | Eligible for and willing to obtain a U.S. Security Clearance

PROFESSIONAL SUMMARY

Computer Science candidate (B.S., Aug. 2026) and software developer with experience building real systems end-to-end, from architecture through hardware integration and deployment. Strongest in Java, with hands-on experience in embedded systems, Python, and JavaScript/React. Picks up new tools and languages quickly and works comfortably across the stack, from low-level hardware up to AI-driven applications.

TECHNICAL SKILLS

Languages: Java, C#, Python, JavaScript, SQL, HTML/CSS

Frameworks & Runtimes: Spring (familiarity), Node.js, Express, React, .NET 8

Databases: MySQL (relational), data modeling

Software Engineering: Full SDLC, Agile/Scrum, Git/GitHub, GitLab, Gradle, CI/CD (GitHub Actions), RESTful APIs, OOP, Data Structures & Algorithms, Design Patterns, Unit Testing (JUnit), UML

Security & Compliance: NIST-aligned GRC, SARIF static analysis, secure development practices

Cloud & AI: Microsoft Azure (AI Foundry), GPT-4o, Hugging Face, Prompt Engineering

Networking & Systems: TCP/IP, DNS, HTTP/HTTPS, Cisco Routers, Fiber Optics, Linux/Unix CLI, Windows

EXPERIENCE

Software Engineer Intern — MI Technical Solutions, Chesapeake, VA

May 2026 – Present

- Sole software developer on a 3-person R&D team delivering a hull-inspection robot for a defense client; own the full software stack from architecture through hardware integration and testing.
- Built the Java operator-control application—real-time servo actuation, Xbox-controller input, and an end-to-end telemetry pipeline (Arduino → Raspberry Pi → Java UI) streaming IMU, ultrasonic, and live-camera data into one operator dashboard over serial and I²C.
- Iterated the system from prototype toward a working build, resolving embedded integration issues with the mechanical and electrical engineers.

IT Intern — City of Chesapeake, Chesapeake, VA

Jan. 2026 – Apr. 2026

- Contributed to development of a Governance, Risk, and Compliance (GRC) application to track and manage security artifacts across city infrastructure, supporting NIST-aligned compliance and reporting.
- Configured and deployed network infrastructure (Cisco), managing hardware installation and maintenance across city facilities.
- Conducted site surveys to evaluate network coverage, identify infrastructure gaps, and document findings for technical review.

PROJECTS

Keelson — AI-Assisted Ship-Repair Documentation

React, LLM API, Structured JSON

- Built a React app that turns unstructured field evidence (photos, notes) into formal, structured maintenance reports for defense and ship-repair facilities, calling an LLM API with engineered prompts that return strict JSON parsed against a typed schema.
- Designed a human-in-the-loop pipeline (AI draft → inline edit → section-level QA verification → sign-off → export) with per-line evidence traceability, a deterministic offline fallback for API failures, and a submission-ready export mapped to required maintenance-database fields.

AI-Powered DevOps Automation — Microsoft AI Dev Days 2026

C#/.NET 8, Azure AI Foundry, GPT-4o

- Designed the end-to-end architecture for a six-agent sequential pipeline where each agent calls GPT-4o with a specialized system prompt and returns structured JSON.
- Implemented a human-in-the-loop approval gate, SARIF-compliant static analysis findings, and a real-time SignalR dashboard integration.
- Decomposed the workflow into discrete, swappable agent roles (context loading, planning, code generation, QA review, execution), each independently testable; delivered the demo in an Agile team alongside a project manager and a second developer.

EDUCATION

Old Dominion University — B.S. in Computer Science, GPA 3.2

Aug. 2024 – Aug. 2026

Tidewater Community College — A.S. in Computer Science, GPA 3.2

Aug. 2022 – May 2024
